Next-Generation Storage for Mission-Critical Workloads

We build and deliver StorPool Storage - an innovative data storage and management platform for large-scale cloud infrastructure. It converts sets of standard servers into primary or secondary storage systems. It is the ideal solution for companies that aim to optimise and grow their business, eliminate data storage issues, or secure fast and reliable access to data to achieve their business goals.

Build Reliable, Agile, Speedy, and Cost-Effective Clouds

StorPool storage systems are ideal for storing and managing the data of primary workloads - databases, web servers, virtual desktops, real-time analytics solutions, and other mission-critical software. StorPool enables our partners and customers to deploy and grow reliable, agile, speedy, and cost-effective clouds that accelerate their services and delight their users. We deliver StorPool with a hosted monitoring suite that collects hundreds of metrics per second to provide deep insights into their data's performance and availability.

The Fastest and Most Efficient Storage Software on the Market

Under the hood, StorPool provides standard block device interfaces to virtualised, containerised, or bare-metal workloads. The specific benefits partners and customers get from StorPool Storage are numerous and based on their use cases and their cloud's scale. However, all these benefits derive from five core StorPool capabilities.

Reliable: an enterprise-grade solution that brings their cloud's reliability to a whole new level, so they never have to worry about service quality again.

Speedy: as the fastest feature-rich storage platform on the market, StorPool accelerates our partners' applications several times and enables them to expand faster.

Agile: they leverage multiple storage tiers to deliver services that meet the needs of all their use cases while scaling from single-app systems to multi-data-centre deployments.

Multi-Hypervisor Support: by connecting a single StorPool storage system to all their cloud platforms, our partners streamline their entire IT operations.

Utterly Hands-off: our storage experts ensure that end-users experience fast and reliable services so our partners' teams have time for the projects that aim to grow their business.

The Only Data Storage Partner You Need

We are data storage experts, so our partners and customers don't have to be. Our product helps businesses that host a lot of mission-critical data in their data centres. By working with StorPool, they grow with the peace of mind that their cloud's foundation is running optimally.

Reliable Business Partner

At StorPool, we are working hard to engineer better ways to store and manage data. We aim to solve real-world problems for our partners and customers instead of subscribing to the hype culture that's taking over the world. As a result, we deliver robust storage products, with a strong entity behind these products. Thanks to our approach:

- StorPool is consistently profitable for the last five years.
- We are achieving growth rates of 100% to 300% per year.
- Our solution earns the respect and satisfaction of our partners every single day.

Driving Humanity Forward

Our partners manage critical data for organisations like the National Aeronautics and Space Administration (NASA), the European Space Agency (ESA), Deutsche Boerse, NASDAQ, the European Organization for Nuclear Research (CERN), and many other organisations that are driving humanity forward. Thanks to their decision to use StorPool Storage as the foundation for their clouds, people move faster, live safer, and have better lives.

What our Partners Say about StorPool

The StorPool product is perfect from both a technical and performance point of view. Second - and for us equally important - is the way StorPool help us to build the most advanced hosting platform and their fast and committed support in case of an issue.

Hink Wiersema
Atos, PM & Architect

We are very pleased with the engagement with StorPool and their ability to meet our special needs. In addition to the unique data storage solution, they provide us with first-class support, with which we are very happy!

Dan Mårtensson
Dustin, Infra & Cloud PM

We have a core company value of aiming for excellence. We couldn't put our hands on our hearts and say we were aiming for excellence whilst using our previous storage solution. It was time for a change!
